PROFESSIONAL SUMMARY

Frontend Developer with **nearly 5 years of commercial experience, including 2 years with React, TypeScript and Next.js**. Experienced in responsive UI development, JavaScript optimization, SSR and SEO. My most recent commercial role strengthened my JavaScript, UI component development, performance optimization and collaborative product maintenance skills. Demonstrating current React practice through DepScan, a personal application with AI API integration, streamed results and automated tests.

TECHNICAL SKILLS

Commercial React — Edsson: React, TypeScript, Next.js (SSR), Tailwind CSS, Storybook
Commercial storefronts — UTD: JavaScript, Liquid, SCSS, Tailwind CSS, Shopify
Frontend & UI: JavaScript (ES6+), Redux, REST APIs, Fetch/AJAX, HTML5, CSS3, SCSS/SASS, BEM, responsive and pixel-perfect layouts
Performance: Core Web Vitals, code splitting, lazy loading, memoization
DepScan — personal project: React 19, Next.js 16, TypeScript, Claude API, App Router, Zustand, Zod, SSE, list virtualization
DepScan testing: Vitest, React Testing Library, Cypress; unit, integration and end-to-end tests
AI tools: Claude Code, OpenAI Codex, GitHub Copilot, JetBrains Junie
Tools & practices: Git, GitHub, GitLab, Vite, Vercel, ESLint, Jest, Agile, Scrum, Kanban

WORK EXPERIENCE

Frontend Developer | Edsson

May 2021 - May 2023 | React, TypeScript, Next.js

• Built **React / TypeScript** features with Next.js server-side rendering, memoization and lazy loading to improve crawlability and runtime performance.
• Implemented AJAX-based content updates without full page reloads and integrated HubSpot CRM for customer communication and engagement tracking.
• Worked with Tailwind CSS, Storybook and Git-based team workflows to deliver and maintain UI features.

Projects: Edsson | Specifai

Frontend Developer | UTD

Sep 2023 - Jun 2026 | JavaScript, Liquid, SCSS, Tailwind CSS

• Built and shipped **6-7 custom Shopify themes** in teams of **2-5 developers**, creating responsive layouts and reusable sections.
• Reduced page load time by **~20%** through JavaScript refactoring and asset optimization, improving storefront UX and Core Web Vitals.
• Refactored legacy JavaScript across Shopify theme components, reducing recurring UI defects and improving release stability.

Selected work: Boutique | Gain | Allure

SELECTED PROJECT

DepScan | AI Dependency Analyzer

Frontend Developer | Personal project

Jun 2026 - Jul 2026 | React 19, Next.js 16, TypeScript, Claude API

Live: depscan-nine.vercel.app | Code: github.com/NazarLunych/depscan

• Built concurrent package analysis with **Server-Sent Events** for live results; a test run processed 31 dependencies in approximately 100 seconds at concurrency 3 without failures.
• Validated AI output with Zod and isolated per-package errors; added GitHub Releases, CHANGELOG and Exa.ai fallbacks for API failures and rate limits.
• Used **dynamic-height list virtualization** for larger results and separated domain state in Zustand from shareable filter and sort state in URL parameters.
• Maintained strict TypeScript with no explicit any; tested with Vitest, React Testing Library and Cypress.

EDUCATION

Lviv Polytechnic National University
Bachelor of Science (B.Sc.) in Computer Technology 2017 - 2021

LANGUAGES

Ukrainian: Native | **English:** B1 (Intermediate)
